Dear Hiring Team at Geotab,

I am applying for the AI Agent Developer position because it aligns directly with the type of systems I build: production AI agents that automate real business workflows.

At Mississauga Hyundai, I designed and deployed an automation architecture using n8n, Node.js, and multiple AI models (OpenAI, Claude, Gemini). These systems include a multilingual AI sales agent ("Sophia") capable of handling lead qualification and scheduling across 30+ languages, as well as over 20 production automation workflows integrating CRM, Meta Ads, and Google Cloud services.

My background combines 25+ years of engineering experience with hands-on development of modern AI-driven systems. Having previously led a technology firm serving companies such as Nokia and Siemens, I approach AI solutions not only from a technical perspective but also through measurable operational ROI.

I would welcome the opportunity to demonstrate some of these systems and discuss how my experience building practical AI agents could contribute to Geotab's AI initiatives.

Sincerely,

Fabio Gomez Velasquez
